

SOX10

Zebrafish Mutants

To date, seven mutant alleles of zebrafish *sox10* (*colourless*, *cls*) exist (listed below). They are all recessive, and apparent hypomorphs or nulls. For detailed information, see the [Zebrafish model organism database](#).

Zebrafish mutant alleles of *sox10*:

sox10^{baz1}: point mutation

sox10^{t3}: insertion

sox10^{m241}

sox10^{m618}: point mutation

sox10^{tw2}: point mutation

sox10^{tw11}: point mutation

sox10^{utr13e1}
